

AquaBounty Technologies, Inc. Issues Statement on U.S. Government Funding Bill

December 16, 2019

MAYNARD, Mass., Dec. 16, 2019 (GLOBE NEWSWIRE) -- AquaBounty Technologies, Inc. (NASDAQ: AQB) ("AquaBounty" or the "Company"), a land-based aquaculture company utilizing technology to enhance productivity and sustainability, today issued the following statement regarding the recently released Fiscal Year 2020 U.S. government funding bill:

"AquaBounty has always supported clear, transparent labeling of our bioengineered salmon, even before federal disclosure requirements were put in place, and while this new language will finally allow us to commercialize our FDA-approved bioengineered salmon, we believe it is completely unnecessary. Moving forward, we will work with the FDA and USDA on how to comply with this vague new language, which was inserted by Senator Lisa Murkowski as an appropriations rider. Senator Murkowski continues to single out a small, innovative, American company in a misguided attempt to protect a parochial special interest when, in reality, the rider most benefits Chilean and Norwegian companies that currently export more Atlantic salmon to the U.S. than any American company produces. Because AquaBounty's salmon is safe and identical to other farm-raised Atlantic Salmon, this provision sets a dangerous precedent for all bioengineered foods because it was passed as an appropriations rider, yet has nothing to do with funding, and it imposes a mandate that targets a single company and product and calls into question the regulatory process and federal disclosure requirements."

About AquaBounty Technologies:

AquaBounty is a leader in the field of land-based aquaculture and the use of technology for improving its productivity and sustainability. The Company's objective is to ensure the availability of high-quality seafood to meet global consumer demand, while addressing critical production constraints in the most popular farmed species.
